

An Essay on Technology and Education

We live in the digital era in which technology plays a very vital role. Every year or even very frequently we are introduced to a wide range of software and new technologies, these things improve the tech market and also improve our lives in one way or the other making our day to day life easier and comfortable.

The mode of education was not the same and it has changed gradually since the beginning, there were no books, notebooks or any source of knowledge to gain or learn things. The students used to learn whatever their teacher taught than in class. When the paper was introduced, including the pen, the forces' developed and we now have the new technology in our new mode of education and learning.

This technology was introduced in education and re used in many schools classrooms, which help students to cope up with education and with what they are being taught by their teachers.
